

Turbine Flow Meter

StaTurb TF100 Series - Standard

Introduction

StaTurb TF100 series flowmeter contains a magnetic detector and a magnetically permeable rotor (impeller). The flow of the medium drives the rotor (impeller) to turn. The rotational speed of the rotor (impeller) is proportional to the flow velocity of the medium. The magnetic detector detects the rotational speed of the rotor and converts it into a standard industrial electrical signal for output or display.

TF100 series are used to measure medium or lower viscosity media, such as water, light fuel, solvent, hydraulic oil, lubricating oil etc.

Characteristics

- High pressure resistance
- Low pressure loss
- Fast response
- High repeatability and accuracy
- Resistant to contamination
- Pulse /analog output

Applications

- Petrochemical/energy industry
- Hydraulic /lubrication system
- Water treatment
- Oil /gas industry
- Experimental equipment
- Test systems
